Art Unit: 1773

## **DETAILED ACTION**

### **Priority**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

#### Claim Objections

3. Claim 8 is objected to because of the following informalities: "six" should been replaced with --sixth--. Appropriate correction is required.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eida et al. (U.S. Patent 5,869,929) in view of Tomalia et al. (U.S. Patent 5,338,532).

Application/Control Number: 10/620,616

Art Unit: 1773

Eida et al. teach a multicolor luminescent devise comprising a color conversion layer, a light emitting layer, and a transmittable medium (column 4, lines 32-44). The color conversion layer comprises a fluorescent layer composed of a resin and a fluorescent coloring matter dispersed in the resin (column 7, lines 61-68). The fluorescent coloring matter may be any dye, provided that the dye exhibits fluorescence (column 8, lines 31-33).

Eida et al. do not teach the presence of a dendrimer in the fluorescent layer.

Tomalia et al. teach a starburst polymer used as a carrier for other materials (column 1, lines 14-16). Conjugating the material within a starburst polymer allows for the delivery of higher concentrations of material, a more controlled and targeted delivery, and the delivery of multiple species (column 1, lines 19-28). The starburst polymer illustrated in Figure 1 is a fifth generation dendrimer comprising a core portion and branched portions that are repeating units (i.e. monomers). The starburst polymer is associated with another material such as a fluorescing entity (column 7, lines 13-20). The material may be attached through a covalent bond or physically encapsulated (i.e. in a clathrate state) in the core of the polymer (column 7, lines 28-36). In the embodiment of Example 20, a fluorescent dye is encapsulated in the starburst polymer (column 48, lines 55-68).

One of ordinary skill in the art would be motivated to incorporate the fluorescent dye of Eida et al. into a starburst polymer system to allow for a higher concentration of dye to be added in a more controlled and targeted manner.

Application/Control Number: 10/620,616

Art Unit: 1773

## Conclusion.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramsey Zacharia whose telephone number is (571) 272-1518. The examiner can normally be reached on Monday through Friday from 9 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Thibodeau, can be reached on (571) 272-1516. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
